

# JANOME

## Accessory of the Month

January 2021

### Flower Stitch Attachment

The Flower Stitch attachment has been one of our top selling accessories in years gone by. Today, this accessory is a Janome blister packed optional accessories including instructions. If you own a low shank sewing machine with drop feed, then this accessory is for you. Even when using sewing machines without many stitches, this attachment will allow you to produce unique and pretty flowers/patterns and also eyelets, with ease.

Simply by changing the size of the circle and the stitch width, you can sew various types of flowers/patterns. Moreover, by combining different types of patterns, you can create your own unique designs. Use your creative flair to make completely original patterns!

Before stitching on a project, it is recommended to test sew as there are stitches that will match at the start and end position and those that won't.

This Accessory of the Month has a bonus project using the Flower Stitch Attachment.
