Accessory of the Month

October 2021

AcuFil Quilting Kit

This AcuFil™ Kit allows you to perfectly stipple your quilts or quilting projects giving you a professional quilted finish. As the process is carried out using the embroidery machine, it means that you can comfortably embroider curves and feathers, if you are not the most confident free motion quilter. Simply use the software on a PC to design a single hooping or all over stippled quilt; print the template and start the quilting process. The software allows for many different options and includes designs to get you started.

Note: This software is native to Windows. Contact an Apple Mac store for more information on installing native windows software programs on to a Mac computer.

This Accessory of the Month has a bonus project using the AcuFil Quilting software.
